

What's happening in tech? #09: 21/08/2024

Today's prominence

- **Release of IBM's System/38 (1979):** IBM announced the System/38, a minicomputer that introduced several advanced features, including integrated database management, a new object-oriented architecture, and a single-level storage concept. This machine laid the groundwork for the future of IBM's midrange systems, eventually leading to the AS/400 and IBM i.
- **Introduction of Mac OS X 10.4.7 (2006):** Apple released Mac OS X Tiger 10.4.7, an update that included various bug fixes and improvements. It was part of the Tiger series, known for introducing Spotlight, Dashboard, and other features that shaped modern macOS.
